codes written in it can be downloaded from the "Textbook Companion Project"
section at the website <http://scilab.in>

Book Description

Title: Modern Communication Circuits

Author: J. R. Smith

Publisher: Tata McGraw-Hill, New Delhi, India

Edition: 1

Year: 2006

ISBN: 0-07-058271-8

Scilab numbering policy used in this document and the relation to the above book.

Exa Example (Solved example)

Eqn Equation (Particular equation of the above book)

AP Appendix to Example(Scilab Code that is an Appednix to a particular Example of the above book)

For example, Exa 3.51 means solved example 3.51 of this book. Sec 2.3 means a scilab code whose theory is explained in Section 2.3 of the book.

Contents

List of Scilab Codes	4
1 Introduction to Radio Communication System	10
2 Small Signal Amplifiers	13
3 Network Noise and Intermodulation Distortion	27
4 Frequency Selective Network and Transformers	41
5 High Frequency Amplifiers and Automatic Gain Control	48
6 Hybrid and Transmission Line Transforms	66
7 Oscillators	68
8 Phase Locked Loops	80
9 Phase Locked Loop Analysis	84
10 Frequency Synthesizers	95
11 Power Amplifiers	101
12 Modulators and Demodulators	109
