# **Book Description**

**Title:** Engineering Circuit Analysis

**Author:** W. Hayt, J. Kemmerly And S. Durbin

**Publisher:** Tata McGraw - Hill Education, New Delhi

**Edition:** 6

**Year:** 2008

**ISBN:** 0070611054

Scilab numbering policy used in this document and the relation to the above book.

**Exa** Example (Solved example)

**Eqn** Equation (Particular equation of the above book)

**AP** Appendix to Example(Scilab Code that is an Appednix to a particular Example of the above book)

For example, Exa 3.51 means solved example 3.51 of this book. Sec 2.3 means a scilab code whose theory is explained in Section 2.3 of the book.

# Contents

<b>List of Scilab Codes</b>	<b>5</b>
<b>2 Basic components and Electric Circuits</b>	<b>13</b>
<b>3 Voltage and Current laws</b>	<b>17</b>
<b>4 Basic Nodal and Mesh Analysis</b>	<b>33</b>
<b>6 Network Theorems and useful Circuit Analysis Techniques</b>	<b>50</b>
<b>7 Capacitors and Inductors</b>	<b>77</b>
<b>8 Basic RL and RC circuits</b>	<b>84</b>
<b>9 The RLC Circuit</b>	<b>94</b>
<b>10 Sinusoidal Steady state Analysis</b>	<b>105</b>
<b>11 AC Circuit Power Analysis</b>	<b>115</b>
<b>12 Polyphase Circuits</b>	<b>124</b>
<b>13 Magnetically coupled circuits</b>	<b>131</b>
<b>14 Complex frequency and the Laplace Transform</b>	<b>136</b>
<b>15 Circuit Analysis in the s domain</b>	<b>142</b>
<b>16 Frequency Response</b>	<b>146</b>

<b>17 Two Port Networks</b>	<b>155</b>
<b>18 Fourier Circuit Analysis</b>	<b>162</b>

# List of Scilab Codes

Exa 2.1	Power . . . . .	13
Exa 2.2	Dependent sources . . . . .	14
Exa 2.3	Ohm law . . . . .	14
Exa 2.4	Ohm law . . . . .	15
Exa 6.10	The Superposition principle . . . . .	58
Exa 6.17	Reciprocity Theorem . . . . .	64
Exa 6.18	Reciprocity Theorem . . . . .	67
Exa 6.19	Millman Theorem . . . . .	68
Exa 6.22	Tellegen Theorem . . . . .	71
Exa 7.1	The Capacitor . . . . .	77
Exa 7.2	The Capacitor . . . . .	77
Exa 7.3	The Capacitor . . . . .	80
Exa 7.7	The Inductor . . . . .	81
Exa 9.1	The Source free parallel circuit . . . . .	94
Exa 9.4	Graphical Representation of Overdamped response . . . . .	95
Exa 10.4	The Inductor . . . . .	105
Exa 11.1	Instantaneous Power . . . . .	115
Exa 11.2	Average Power . . . . .	117
Exa 11.3	Average Power . . . . .	118
Exa 11.4	Average Power . . . . .	119
Exa 11.6	Average Power for Non periodic Functions . . . . .	120
Exa 11.7	Average Power for Non periodic Functions . . . . .	121
Exa 11.8	Apparent Power and Power factor . . . . .	121
Exa 11.9	Complex Power . . . . .	122
Exa 12.2	Three phase Wye connection . . . . .	124
Exa 12.3	Three phase Wye connection . . . . .	126
Exa 12.4	Three phase Wye connection . . . . .	127
Exa 12.5	The Delta connection . . . . .	128

Exa 12.6	The Delta connection . . . . .	128
Exa 12.7	Power measurement in three phase systems . . . . .	129
Exa 13.2	Mutual Inductance . . . . .	131
Exa 13.4	Energy considerations . . . . .	132
Exa 13.5	T and PI equivalent networks . . . . .	132
Exa 13.6	T and PI equivalent networks . . . . .	133
Exa 13.8	Equivalent Circuits . . . . .	135
Exa 14.2	Definition of the Laplace Transform . . . . .	136
Exa 14.3	Inverse Transform Techniques . . . . .	136
Exa 14.4	Inverse Transform Techniques . . . . .	137
Exa 14.5	Inverse Transform Techniques . . . . .	137
Exa 14.6	Inverse Transform Techniques . . . . .	138
Exa 14.7	Basic Theorems for the Laplace Transform . . . . .	138
Exa 14.8	Basic Theorems for the Laplace Transform . . . . .	139
Exa 14.9	Basic Theorems for the Laplace Transform . . . . .	139
Exa 14.10	The time shift theorem . . . . .	140
Exa 14.11	The Initial and Final value theorems . . . . .	140
Exa 15.1	Modeling Inductors in the s domain . . . . .	142
Exa 15.2	Modeling capacitors in the s domain . . . . .	143
Exa 15.4	Nodal and Mesh analysis in s domain . . . . .	143
Exa 15.6	Additional circuit analysis techniques . . . . .	144
Exa 15.9	Convolution and Laplace Transform . . . . .	144
Exa 15.10	Convolution and Laplace Transform . . . . .	145
Exa 16.1	Parallel Resonance . . . . .	146
Exa 16.2	Bandwidth and high Q circuits . . . . .	146
Exa 16.3	Series Resonance . . . . .	147
Exa 16.4	Other resonant forms . . . . .	148
Exa 16.5	Equivalent Series and parallel combination . . . . .	149
Exa 16.6	Scaling . . . . .	149
Exa 16.8	Bode diagrams . . . . .	150
Exa 16.10	Bode diagrams . . . . .	152
Exa 16.11	Filters . . . . .	152
Exa 16.12	Filters . . . . .	153
Exa 16.13	Filters . . . . .	153
Exa 17.1	One port networks . . . . .	155
Exa 17.2	One port networks . . . . .	156
Exa 17.3	One port networks . . . . .	156
Exa 17.7	Some equivalent networks . . . . .	157

Exa 17.8	Impedance parameters . . . . .	159
Exa 17.9	Hybrid parameters . . . . .	160
Exa 17.10	Transmission parameters . . . . .	161
Exa 18.1	Trigonometric form of the Fourier Series . . . . .	162
Exa 18.5	Definition of the Fourier Transform . . . . .	164
Exa 18.6	Physical significance of Fourier Transform . . . . .	167

# List of Figures

3.1	Kirchoff current law . . . . .	18
3.2	Kirchoff current law . . . . .	19
3.3	Kirchoff voltage law . . . . .	20
3.4	Kirchoff voltage law . . . . .	21
3.5	Kirchoff voltage law . . . . .	22
3.6	Kirchoff voltage law . . . . .	23
3.7	Kirchoff voltage law . . . . .	24
3.8	Kirchoff voltage law . . . . .	24
3.9	The Single Loop Circuit . . . . .	25
3.10	The Single Loop Circuit . . . . .	25
3.11	The single node pair circuit . . . . .	26
3.12	The single node pair circuit . . . . .	26
3.13	Series and Parallel connected sources . . . . .	27
3.14	Series and Parallel connected sources . . . . .	28
3.15	Resistors in series and parallel . . . . .	29
3.16	Resistors in series and parallel . . . . .	29
3.17	Voltage and Current division . . . . .	30
3.18	Voltage and Current division . . . . .	30
3.19	Voltage and Current division . . . . .	31
3.20	Voltage and Current division . . . . .	32
4.1	Nodal analysis . . . . .	34
4.2	Nodal analysis . . . . .	34
4.3	Nodal analysis . . . . .	35
4.4	Nodal analysis . . . . .	35
4.5	The supernode . . . . .	36
4.6	The supernode . . . . .	37
4.7	The supernode . . . . .	38
4.8	The supernode . . . . .	38

4.9	Mesh analysis . . . . .	39
4.10	Mesh analysis . . . . .	40
4.11	Mesh analysis . . . . .	41

# Chapter 2

## Basic components and Electric Circuits

Scilab code Exa 2.1 Power

```
1 //Example 2.1
2 //Computation of power absorbed by each part
3 //From figure 2.13a
4 V=2; I=3;
5 //We have Power(P)=V*I
6 P=V*I
7 printf("a) Power =%dW\n",P)
8 if P>0 then
9     printf("Power is absorbed by the element\n")
10 else
11     printf("Power is supplied by the element\n");
12 end
13
14 clear P;
15 //From figure 2.13b
16 V=-2; I=-3;
17 //We have Power(P)=V*I
18 P=V*I
19 printf("b) Power =%dW\n",P)
```

```

20 if P>0 then
21     printf("Power is absorbed by the element\n")
22 else
23     printf("Power is supplied by the element\n")
24 end
25
26 //From figure 2.13c
27 V=4; I=-5;
28 //We have Power(P)=V*I
29 P=V*I
30 printf(" c) Power =%dW\n",P)
31 if P>0 then
32     printf("Power is absorbed by the element\n")
33 else
34     printf("Power is supplied by the element\n")
35 end

```

---

### Scilab code Exa 2.2 Dependent sources

```

1 //Example 2.2
2 //Calculate vL
3 disp("Given")
4 disp("v2=3V")
5 v2=3;
6 //From figure 2.19b
7 disp("Considering the right hand part of the circuit
    ")
8 disp("vL=5v2")
9 vL=5*v2;
10 disp("On substitution")
11 printf("vL=%dV\n",vL);

```

---

### Scilab code Exa 2.3 Ohm law

```

1 //Example 2.3
2 //Calculate the voltage and power dissipated across
   the resistor terminals
3 //From figure 2.24b
4 disp("Given")
5 disp("R=560 ohm ; i=428mA")
6 R=560; i=428*10^-3;
7 //Voltage across a resistor is
8 disp("v=R*i")
9 v=R*i;
10 printf("Voltage across a resistor=%3.3fV\n",v)
11
12 //Power dissipated by the resistor is
13 disp("p=v*i")
14 p=v*i;
15 printf("Power dissipated by the resistor=%3.3fW\n",p)

```

---

#### Scilab code Exa 2.4 Ohm law

```

1 //Example 2.4
2 //Calculate the power dissipated within the wire
3 //From figure 2.27
4 disp("Given")
5 disp("Total length of the wire is 4000 feet")
6 disp("Current drawn by lamp is 100A")
7 //Considering American Wire Gauge system (AWG)
8 //Referring Table 2.4
9 disp("4AWG=0.2485ohms/1000 ft")
10 l=4000; i=100 ; rl=0.2485/1000;
11 //Let R be the wire resistance
12 R=l*rl;
13 //Let p be the power dissipated within the wire
14 disp("p=i ^2*R")
15 p=i^2*R

```

```
16 printf("Power dissipated within the wire=%dW\n",p)
```

---
